

Dust-tainer™

Waste Dust Containment System

A New Standard.

Cutting-edge designs from North America's largest bulk bag manufacturer.

Environmentally Responsible.

Eco-friendly Dust-Tainer is uniquely designed to prevent waste dust from being released into the air. Waste dust enters the fully-contained Dust-Tainer through conventional spouts and chutes. While in operation, the only access to Dust-Tainer is through Berry Plastics' innovative zipper design – which contains waste dust and minimizes its emission from the bag. Once full, Dust-Tainer chutes are tied shut – and the bag is ready for disposal, in accordance with environmental regulations.

The Dust-Tainer Difference.

- **Zipper.**
One-of-a-kind zipper design allows limited access to Dust-Tainer, preventing waste dust emission into the air.
- **Maximizing Space.**
Dust-Tainer's zipper provides access to the bag while it's being filled, permitting raking and flattening of its contents. More capacity is created to fill Dust-Tainer to the top – maximizing interior space.
- **Chutes.**
Waste dust enters Dust-Tainer through conventional chutes. Once full, chutes are tied shut with durable polypropylene straps.
- **Custom Specs.**
Dust-Tainers are customized to meet unique customer specifications and operational systems.

Ideal Applications

Responsible solutions for industries creating waste dust.

Foundry

Refractory

Steel

Ceramics
